

Minutes of Meeting - 05/24/2019

Attendees: Nandan Parikh, Prateek Malhotra and Tanmay Chinchore

- Finalizing project scope after mail from Prof
- Hypothesis: the distance between modules for individual developers increases over time
- Hypothesis: visual graph representation of developer vs modules worked
- Developer assignment with new modules introduced, how it affects the repo
- Brainstorm over: anecdotes or additional information to hypothesize why we believe certain projects have different number of people involved in the project for Open Source

Tasks:

- Graph representation per developer – feasibility
- New repos to check the project on
- Commit data generation per author per month in separate repo
- Test shell script across projects to find the relevance of commit data
- Integrating author data in graph modules
